jdoig@canri.nsw.gov.au

CANRI - the vision

An open platform for information sharing to improve natural resource management by the whole community

Increasingly we need to...

- Use each other's data
- Seamlessly integrate & link our information products
- Maintain control of our data for security, Quality Control and updating

Whatever we do, it must be:

adaptable - extensible - scalable

Custodianship principles

- Trusteeship
- Setting and use of data standards
- Collection & maintenance of information
- Authoritative source
- Accountability
- Maintain access

Technical principles

- Scalable, distributed model
- Separate data serving from presentation
- Data served once for multiple purposes
- Custodians serve their own data
- Domain-specific applications
- Focus on web mapping (spatial integration)
- Driving & implementing technical standards
- Establishing SCOTS software market

CANRI Program 2000-2004: \$4m/4 years - 10 agencies

- Co-ordination - strategic, integrated
- Data - spatially/Internet enabling
- Systems - performance, functionality
- Standards - “world best practice”
- Products - multi-agency, integrated
- Communication - community needs

High-level political support

"CANRI is a really exciting project ...What CANRI does is not only bring [government information] together, without taking it away from departments but, more importantly, makes it accessible to the community. That's how modern government should be."

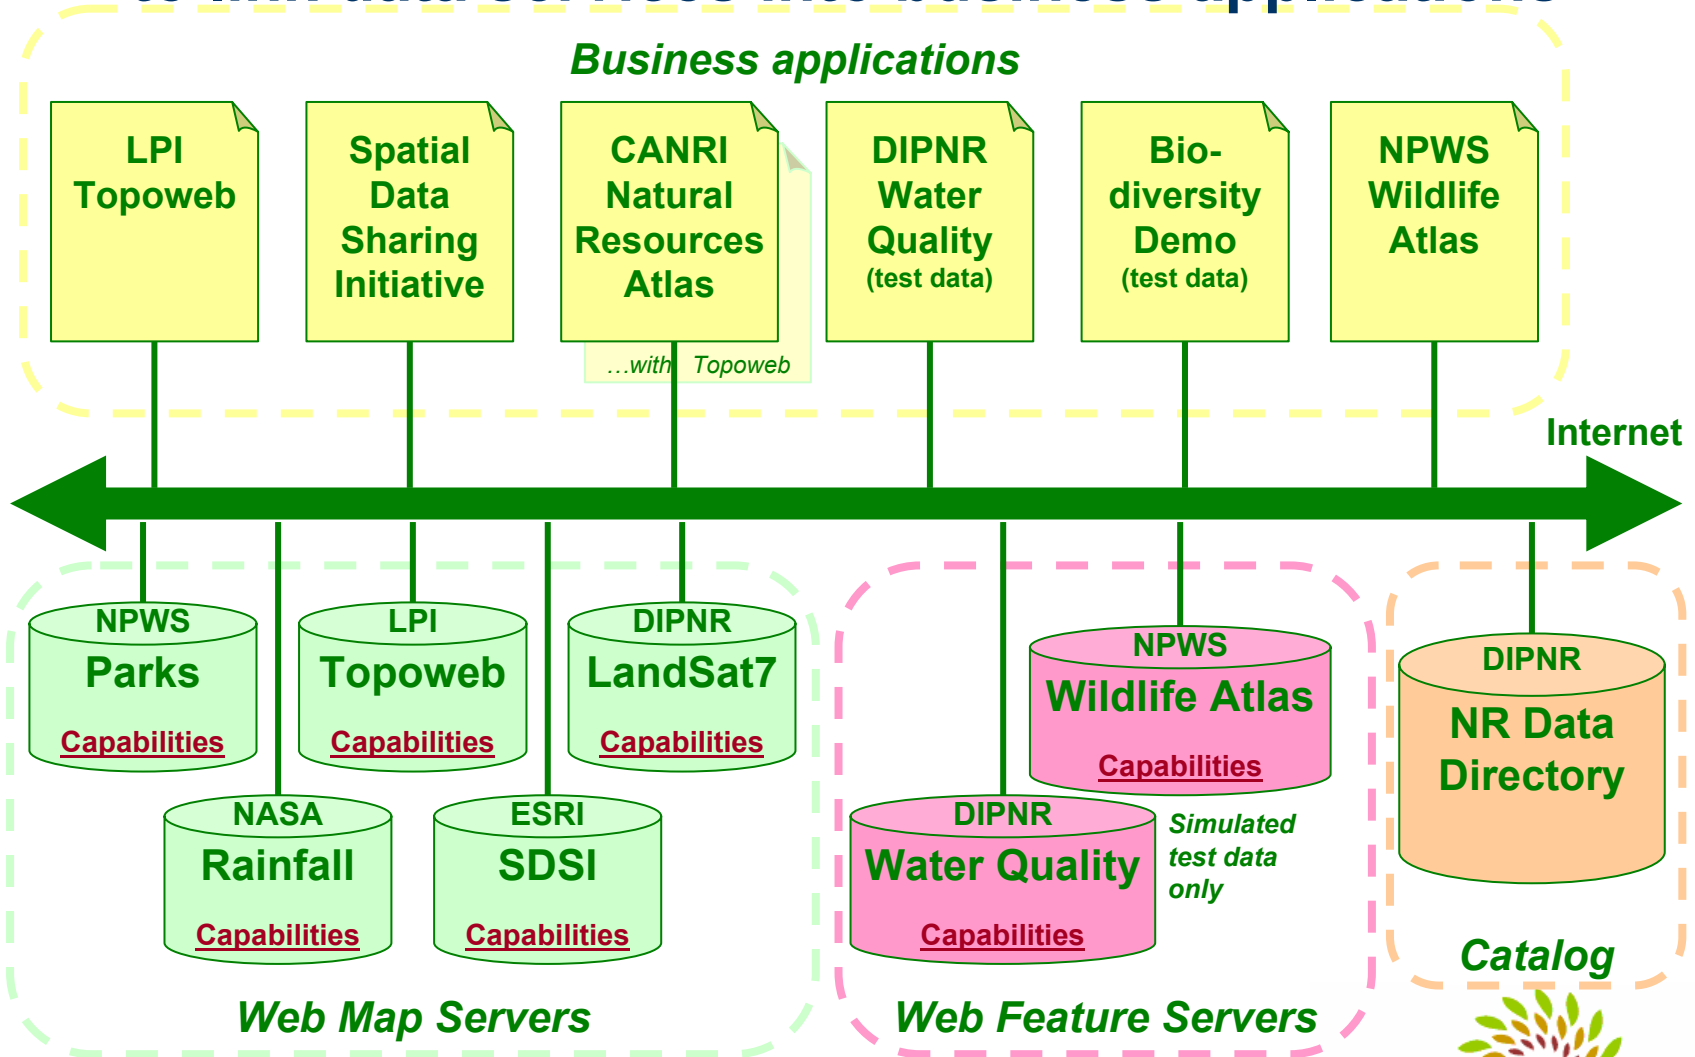

Hon. Dr Andrew Refshauge
NSW Deputy Premier

SEEGRID July 2003

Using OpenGIS[®] services

Planning for sustainability

Focus in CANRI's 4th & final year

- **Consolidate systems**
 - *SCOTS software*
 - *Usability and completeness of product range*
 - *Improve range and depth of data access*
- **Promote products**
- **Seek future funding**

CANRI site redesign

Some emerging issues

- **SDI governance**
- **Quality of service**
- **Common conceptual model**
- **Shared registry**
- **Shared access management**

SDI needs good governance

- **Lead agency & champion**
- **Consensus between sectors**
- **Clear business drivers**
- **Data custodianship principles**
- **Interoperability principles**
- **Open technology standards**

Quality of (web) service

- **Service level agreements**
 - *Reusable web services*
 - *For business-critical applications*
 - *Core business for the information age*
- **Conformance testing**
 - *IT standards*
 - *SDI framework*

System actors

Common conceptual model

- **End-users**
- **Data custodians**
- **Product managers**
- **System administrators**

End users & use cases

Farmer

**Catchment
Management
Authority**

Investor

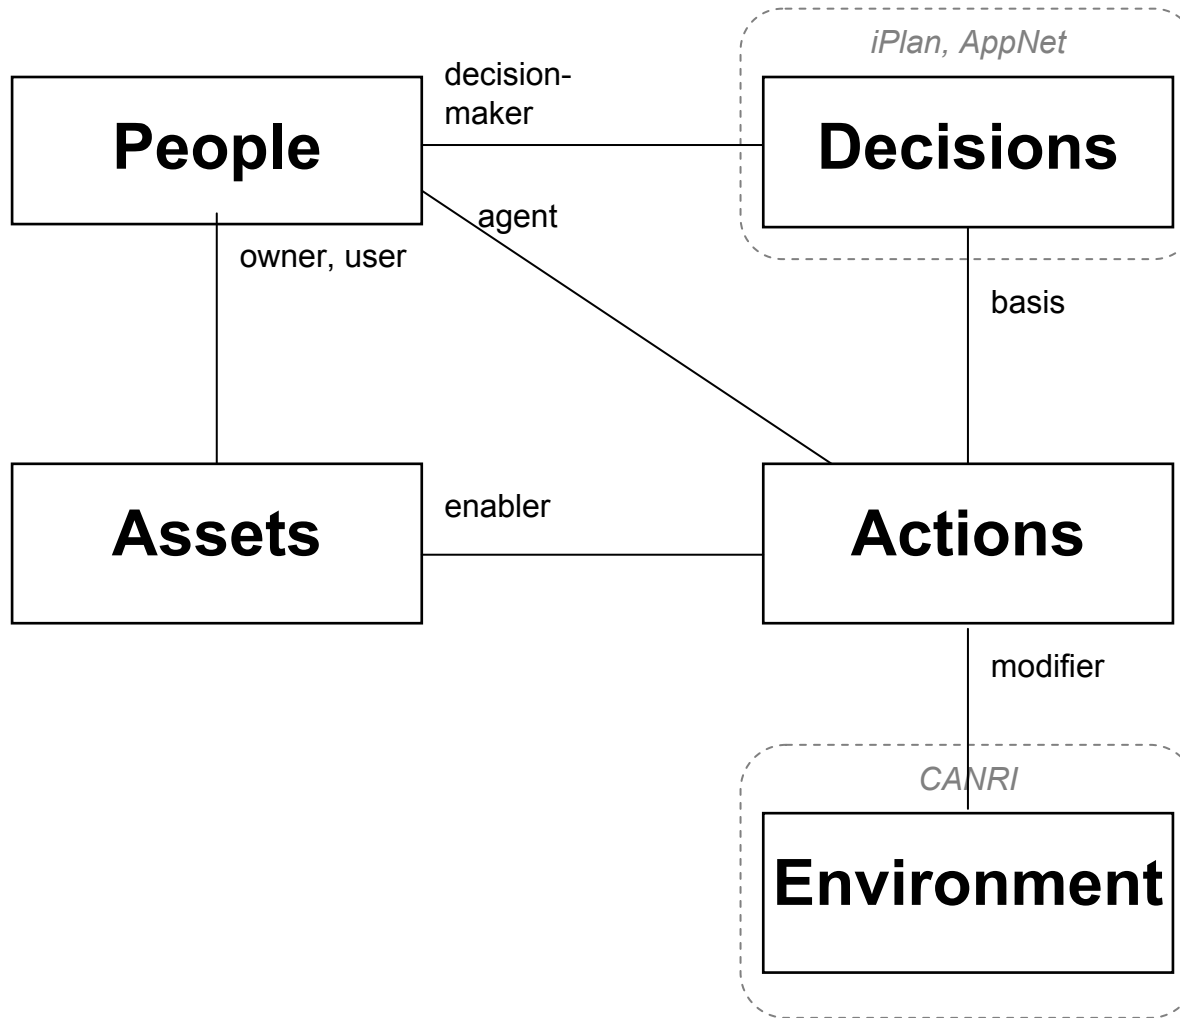

Developer

Government

Information classes

Online registry

Lynchpin of the SDI

- **Not just data, but services, data models, symbology, ...**
- **Whole-of-government responsibility**
- **Standards still emerging**

Web access management

- **Sharing sensitive resources**
- **Single-sign-on**
- **Cost-effective central user repository**
- **WAM pilot funded through connect.nsw and CANRI**

Uses for GRID computing

- **Distributed-source geoprocessing**
- **Visualisation**
- **GIS supported conferencing**

Limiting factors

Not technology

- **Sparsity of data**
- **Requirements definition**
- **Management clarity / political will**
willingness to collaborate

...the power of shared information

www.canri.nsw.gov.au
